

Essential Oils Than & Now Newsletter

By Joanna Barrett, RN, CNHP

September 2009

Frequency

Megahertz (MHz) is a measurement of electrical impulses (frequency) and one of the most intriguing aspects of Young Living essential oils since these oils are distilled in such a way as to keep electrons still active and moving. It's electrons that carry frequency and energy. WellnessPro is like a TENS (Transcutaneous Electrical Nerve Stimulation) except for its much larger frequency range coupled with a unique delivery system that blocks pain signals and helps increase blood flow thereby enhancing various bodily effects that stimulate the cell to a state of restoration and wellness, giving longer results than any other device on the market.

Dr Nikola Tesla wrote: "If you want to find the secrets of the Universe, think in terms of Energy, Frequency and Vibration." This is Electromedicine, defined as the use of electricity to treat physical ailments. It is one of the oldest and most documented sciences known. Medical professionals in ancient Greece (cc 46 AD) learned that the electric impulses emitted from electrical eels in clinical footbaths relieved pain from neuralgia, headache, arthritis and gout. In the 1700's European physicians used controlled electrical currents from electrostatic generators almost exclusively for numerous medical problems involving pain and circulatory dysfunction. In the early 1900's approximately 50% of all medical doctors world-wide used electromedicine in their practice daily. Unfortunately for the science, an incorrect and unfair medical report emerged at that time. This report, produced by powerful special interest groups, discredited the value of both electromedicine and nutrition in medical practice. With fear of condemnation from certain medical institutions (that were funded by these special interest groups) almost all American Physicians abandoned electromedicine and nutrition in their practices despite the scientific studies documented through the 1600's to now in England, Germany, Italy, France, Russia, Canada and USA. In 1991 research scientists DR Neher and Dr Sackman won the Noble Prize in physiology and medicine by detecting electrical currents on the surface of the cell.

The technology has been available to the elite, practitioners and pro athletes for over 60 years. NBA, NFL, WBA, and pro athletes currently use the Wellness Pro technology. It has been used for decades throughout Europe in common practice in various hospitals and clinics. Electrotherapy applications are currently used in the Russian Space program. The Wellness Pro is approved by the FDA for pain management and health rehabilitation.

The human body is like a machine, it wears out in direct proportion to its abuse. A well-balanced body reflects a strong immune system. Longevity is partly the result of natural care and maintenance of the body. Inherently electricity is found naturally in all of us. Certain electrical impulses in our bodies assist bodily functions including actions needed for healing. By mimicking the electrical currents that occur in us, we help facilitate a specific effect. Electromedicine is able to trigger these impulses by varying the frequency, wave length, intensity, and location of the electricity applied to the client. Understanding how these elements interplay to create a desired effect is the basis for the science. Available in our office

With ZERO side effects,

Joanna
